DETAILED ACTION

Response to Amendment

1. This is in response to an amendment/response filed on November 24th, 2008.
2. Claims 10 and 17 have been amended.
3. No claims have been cancelled.
4. No claims have been added.

Reasons for Allowance

5. The following is an examiner's statement of reasons for allowance:

For independent claim 1, the prior art fails to show alone or in combination a method for generating a gigabit-capable passive optical network (GPON) encapsulation method (GEM) frame structure in a gigabit-capable passive optical network that includes generating a new frame structure for determining a payload information of the GEM frame through the header. The prior art of Harel et al. (U.S. Patent Publication 2004/0190548) discloses an efficient transport of SONET signals that includes selecting different encapsulation schemes depending on the type of data to be encapsulated. Wang et al. (U.S. Patent Publication 2004/0052274) discloses a passive optical network that is able to operate using SONET/SDH at the physical layer. While Harel et al. in view of Wang et al. discloses an encapsulation method on a passive optical network, they fail to disclose a method for generating a gigabit-capable passive optical network (GPON) encapsulation method (GEM) frame structure in a gigabit-capable passive optical network that specifically comprises the steps: i) receiving payload information of the GEM frame to provide a

GEM control frame delivering management control information, ii) generating information representing data type information included in a payload according to payload information of the GEM frame iii) including information generated in step ii) into a header of the GEM frame and generating a new GEM frame structure for determining a payload reformation of the GEM frame, through the header, wherein information representing data type information included in the payload represents a data type of a payload of the GEM :frame, and the GEM frame is one of the control frame, a TDM (Time Division Multiplex) data frame, or an Ethernet data frame.

Independent claims 10 and 17 are allowable because they recite similar limitations.
Dependent claims 6, 9, 11, and 18 are allowable because they depend on the allowed claims.
